

Typhoon proof packing

Drop cables by 2x250m shrinkpack coils in metal tins.

Long Life packing suitable to outdoor transport and storage.

This packing put-up has been developed mainly to supply safely any drop cable, usually provided with PVC sheath, on any occasion there is an hostile environment to overcome. This either on transport and stocking the goods in maybe hot, cold, frozen, rainy, wet, snowy, dirty environments and so on.

These following are some typical cases making safe and useful the use of CAVEL tins. In some wild territories of Africa as well as in Middle or Far East countries and maybe worldwide in mountainous areas goods are often re-loaded on small and not covered vans travelling for days around rough lands. Sometimes, goods have to be kept in stock outdoor for a while, before contractors come and install cables and components. In lake districts, along river banks and on seashores goods occasionally fall into the water. Thanks to the sealed and water tight hard metal cover the closed tin, filled with 500m cable, floats instead of sinking and it can be easily recovered on board.

Packing type LL12 - Logistic information
